Nudge Security for Compliance Teams

SaaS and AI compliance & risk management for modern GRC teams

Gain continuous visibility into every SaaS and AI tool in your organization. Nudge Security helps GRC teams protect sensitive data, manage risk, monitor compliance, and prepare for audits—all in one SaaS security and governance platform.

Shadow SaaS: A moving target for compliance

As SaaS and AI adoption surges across today's distributed workforce, GRC teams face increased pressure to govern a constantly shifting digital footprint. Traditional GRC tools struggle against the proliferation of unmanaged apps, third-party vendors, user access controls, and sensitive data transfers. Meeting regulatory requirements like GDPR, HIPAA, SOC 2, and emerging AI regulations demands a comprehensive compliance approach tailored to this modern technology landscape.

Shadow IT

90% of apps are adopted *outside* of security oversight—a major blindspot in your security posture.

Identity & data sprawl

The average worker issues **70 OAuth grants**, exposing your SaaS data to potential risk.

Supply chain vulnerabilities

Organizations face **six** SaaS supply chain data breaches yearly on average —widening potential attack vectors.

What makes Nudge Security different?

Perimeterless
Gain visibility and control of SaaS and AI use no matter the network, employee location, or device

Immediate value
Setup in minutes for a complete historical SaaS inventory and actionable insights on day one.

People-centric
Deliver just-in-time policies and guardrails to prevent risky decisions and behaviors

AI-powered risk insights
Prioritize and act faster with proprietary vendor risk insights and supply chain data breach alerts.

Cost-positive
Surface and eliminate unnecessary apps and accounts to reduce risk and cost.

Nudge Security: SaaS security & governance at the Workforce Edge

Nudge Security enables GRC teams to streamline IT audits and ongoing IT governance efforts in compliance with SOC 2, HIPAA, PCI DSS, ISO 27001, and more, even as your SaaS and AI footprint changes.

With Nudge Security, GRC teams can optimize data protections, close compliance gaps, and meet critical requirements.

SaaS & AI inventory
Maintain a continuous system of record for all SaaS and AI apps, vendors, accounts that fall within compliance scopes—including shadow IT— without proxies, agents, or integrations.

Third-party risk
Continuously monitor vendor security postures, compliance certifications, and data locality practices. Report on the scope and impact of third- and fourth-party security breaches.

User access reviews
Accelerate compliance access reviews with automated workflows, audit-ready reporting, and complete visibility into user activity and access privileges across your SaaS ecosystem.

AI & data governance
Monitor AI tool usage, data sharing practices, and integrations to enforce AI governance and maintain compliance. Provide automated guardrails for safe, compliant AI adoption.

Secure configurations
Continuously assess app configurations, identify risks, and track improvements to your SaaS security posture over time. Resolve findings quickly with guided remediation workflows.

Audit-ready reporting
Anticipate auditor questions and concerns and eliminate ambiguity with clear, audit-friendly reporting to demonstrate compliance readiness.

Why modern GRC teams ❤️ Nudge Security

Track compliance risks across your entire attack surface.

Modern workers constantly seek new tools to boost productivity—but your compliance program can only address the SaaS you know about. Nudge Security helps you stay compliant even as your cloud and SaaS infrastructure changes, automatically discovering and categorizing SaaS and AI assets that fall within your compliance scope. This coverage extends across your entire SaaS attack surface, including externally-facing apps, domains, integrations, emerging technologies like AI, and shadow IT.

"Nudge Security is really great at the stuff you don't know you should be looking for. It's great for the cases where you don't even have SSO set up and there are five users of a system, but it's critical. Nudge lets you find those accounts and turn them off, even if they aren't on your standard offboarding checklist."

Jesse Kriss, Head of Security, Watershed

Faster, more effective user access reviews

Trade tedious, manual user access review processes for answers and automation. Nudge Security provides comprehensive visibility into user accounts, permissions, and activities across your SaaS ecosystem—even for applications outside SSO coverage. GRC teams can easily generate detailed access reports, verify appropriate permissions, track changes over time, and document review completions with audit-ready reporting.

"Nudge makes these audits significantly easier and saves us tons of time. Now I'm finishing the quarterly audits in one to three days by myself, instead of one to two weeks with a colleague. I don't need to spend hours chasing down answers anymore because Nudge gives me instant visibility of everything in our environment."

Chris Tuley, IT Specialist, KarmaCheck

Address risks and misconfigurations before they become audit findings.

Anticipate and address compliance risks proactively instead of rushing to address them during audits. By continuously monitoring for misconfigurations, identity risks, and security posture concerns with Nudge Security, you can remediate potential compliance gaps before they appear in audit findings. Nudge Security's clear, audit-ready reporting reduces back-and-forth with auditors, while the platform's rich context makes it easy to answer technical questions about your environment with confidence.

"Within just a few days, I was able to get up to speed on our SaaS security posture, audit our accounts for missing MFA, revoke risky OAuth grants, discover how many accounts for terminated users were still active, assess software platforms for compliance, identify rogue accounts for HR purposes, and 'nudge' users to get clarity on apps we were previously unaware of."

Ronald J. Llewellyn III, Manager of Information Technology, Wallace Plese + Dreher

Enforce compliant SaaS and AI use with automated guardrails.

Even with the clearest corporate policies, every new app and account creates an opportunity for compliance missteps, from disabling MFA to sharing private data with AI tools. Nudge Security acts as a safety net, automatically nudging app owners and account holders with timely guidance and interventions that steer them toward safe, compliant SaaS and AI use.

"When it comes to protecting user identities, timeliness is everything. Nudge's in-browser plugin provides the platform with live telemetry so we can act immediately when a risk is identified and see the most current information possible."

Monte Sonksen, IT Manager, City of Bettendorf

About Nudge Security

Nudge Security delivers SaaS and AI security governance at the Workforce Edge—where employees make thousands of technology decisions daily. Our automated, policy-driven guardrails reach employees when and where they work, enabling rapid technology adoption while minimizing risk and sprawl. Through unrivaled discovery capabilities, AI-driven risk insights, and behavioral science-based engagement, we make security a natural part of how modern work gets done rather than an obstacle to innovation. Nudge Security was founded in 2021 by Russell Spitler and Jaime Blasco and is backed by Ballistic Ventures, Forgepoint Capital, and Squadra Ventures.
