Nudge Security for Security Teams

Complete SaaS and AI security for modern security teams

Nudge Security equips security teams with continuous security monitoring, AI-powered risk intelligence, and automated controls across your SaaS and AI ecosystem. Reduce security risks, manage your attack surface, and strengthen your security posture with one powerful platform.

The SaaS & AI security challenge: A growing attack surface

With SaaS and AI adoption surging across today's distributed workforce, CISOs and security leaders are under increasing pressure to protect an expanding attack surface while also enabling innovation. Traditional security tools like CASBs simply can't handle the explosion of shadow IT, third-party vendors, identity sprawl, and sensitive data shared every day. This modern tech landscape demands a modern approach to security.

Shadow IT

90% of apps are adopted *outside* of security oversight—a major blindspot in your security posture.

Identity & data sprawl

The average worker issues 70 OAuth grants, exposing your SaaS data to potential risk.

Supply chain vulnerabilities

Organizations face six SaaS supply chain data breaches yearly on average —widening potential attack vectors.

What makes Nudge Security different?

Perimeterless
Gain visibility and control of SaaS and AI use no matter the network, employee location, or device

Immediate value
Setup in minutes for a complete historical SaaS inventory and actionable insights on day one.

People-centric
Deliver just-in-time policies and guardrails to prevent risky decisions and behaviors

AI-powered risk insights
Prioritize and act faster with proprietary vendor risk insights and supply chain data breach alerts.

Cost-positive
Surface and eliminate unnecessary apps and accounts to reduce risk and cost.

Nudge Security: SaaS & AI security at the Workforce Edge

Nudge Security empowers security organizations with the visibility, controls, and automation needed to secure their SaaS and AI ecosystems—apps, identities, and data integrations—*everywhere* modern work happens.

With Nudge Security, security teams transform from the "Department of No" to a "Department of How," delivering stronger security posture without blocking innovation or productivity, through:

SaaS attack surface discovery

Discover your entire SaaS and AI attack surface without proxies, agents, or integrations— including shadow IT, externally-facing apps, and registered domains—for continuous security visibility.

Identity threat protection

Map user accounts, access privileges, and authentication methods across your SaaS portfolio. Enforce identity security controls at scale including SSO, MFA, and strong, unique passwords.

Supply chain security

Monitor your SaaS supply chain for breaches, track vendor security postures, and receive real-time alerts about third- and fourth-party security incidents that could impact your organization.

AI & data security

Monitor AI tool usage, data sharing, and integrations to enforce security controls and maintain compliance while unlocking safe AI adoption.

Security posture management

Continuously assess app configurations, identify risks, and track improvements to your SaaS security posture over time. Resolve findings quickly with guided remediation workflows.

Security automation

Deploy customizable security alerts and workflows that automate routine security tasks and guide users toward secure SaaS and AI use with just-in-time security nudges.

Why modern CISOs and security teams ❤️ Nudge Security

Bring your complete attack surface into view.

Eliminate security blind spots across your SaaS and AI ecosystem. Only Nudge Security provides continuous, perimeterless discovery of your complete SaaS attack surface, including externally-facing apps, integrations, and shadow IT, so your security team can identify and remediate risks before they're exploited.

> "It was a huge benefit to be able to plug in Nudge Security and see what [SaaS] was already in use. That was awesome. But it's not just about historical discovery. I also wanted to know when people started using new applications without having to implement a heavyweight approval process."
>
> Jesse Kriss, Head of Security, Watershed

Respond to supply chain breaches with confidence.

When a critical SaaS vendor experiences a breach, security teams need to quickly determine exposure and take action. Nudge Security provides immediate visibility into affected users, connected applications, and potential data exposure, enabling faster, more comprehensive incident response.

> "Nudge Security gives us visibility of our attack surface and alerts us when an app we're using has been breached. We're able to investigate what happened and who's using it, whether that's the CTO or an intern. Getting that information in a timely manner can definitely help us reduce that blast radius as much as we can."
>
> Alei Salem, Team Lead Security, gridX

Automate security controls at scale.

Eliminate manual security remediation efforts. Nudge Security automatically detects and surfaces risky app misconfigurations, data integrations and other security findings across your SaaS environment. The platform empowers you to quickly revoke unauthorized access, enforce critical security controls like MFA, and remediate vulnerabilities by enlisting app owners and technical contacts, instead of creating more work for your security team.

> "Nudge Security fills a unique and valuable role within Stravito's security program. It complements the rest of our security stack by giving us the visibility and automation we need to manage SaaS security at scale."
>
> Marcus Södervall, Head of Security, Stravito

Transform security from blocker to enabler.

The modern workforce needs security teams that enable innovation while also managing risk. Nudge Security shifts security from reactive gatekeeping to proactive enablement with smart, automated guardrails that nudge your workforce toward safe SaaS adoption, while maintaining centralized visibility and governance for the security team.

> "Instead of blocking access, the nudge provides a helpful message, which is just great. The ability to redirect users to our approved apps and see the results in the product is awesome."
>
> Ronald J. Llewellyn III, Manager of Information Technology, Wallace Plese + Dreher

About Nudge Security

Nudge Security delivers SaaS and AI security governance at the Workforce Edge—where employees make thousands of technology decisions daily. Our automated, policy-driven guardrails reach employees when and where they work, enabling rapid technology adoption while minimizing risk and sprawl. Through unrivaled discovery capabilities, AI-driven risk insights, and behavioral science-based engagement, we make security a natural part of how modern work gets done rather than an obstacle to innovation. Nudge Security was founded in 2021 by Russell Spitler and Jaime Blasco and is backed by Ballistic Ventures, Forgepoint Capital, and Squadra Ventures.
